The HD III works as a vehicle communication interface device, which is used to read the vehicle data and then send it to the diagnostic tool via BT/WLAN communication or data cable connection. The LED indicators enable you to easily identify the working status of the HD III.

### LED Indicators

- **Vehicle**: While the HD III is communicating with the vehicle, the indicator lights up and flashes. Otherwise, it will not illuminate.
- **Power**: It illuminates solid red when the HD III is powered on.
- **BT**: Blue indicates the HD III is working in BT communication mode.
- **I/O**: It lights up when the HD III is connected to the diagnostic tool via data cable.
- **Wireless**: It lights up when the HD III works as a WLAN hotspot or network adaptor.

### Knowledge of HD III

The following cables and accessories are only for reference. For detailed accessory items, please consult from the local agency or check the package list supplied with the HD III together.

#### Cables & Accessories

- **Diagnostic Cable**
  - To connect the HD III to the vehicle’s DLC.

- **OD-9 Adaptor**
  - Standard 9-pin Deutsch adaptor for most heavy-duty vehicles. Covers 1995 to present Class 4-8 heavy-duty OEM.

- **OB-16 Adaptor**
  - 16-pin J1962 adaptor for use with heavy-, light, and medium-duty trucks.

- **Type II ORD-9 Adaptor**
  - 9-pin Deutsch adaptor for use with vehicles covering 1998 to present Class 4-8 heavy-duty OEM.

- **ORD-16 Adaptor**
  - 16-pin 19962 adaptor for use with heavy-, light and medium-duty trucks.

- **Cigarette Lighter Cable**
  - To supply power to the HD III through connection to cigarette lighter receptacle.

- **Battery Clamps Cable**
  - To supply power to the HD III through connection to vehicle’s battery.

- **5-pin Deutsch adaptor for use Caterpillar engines**

- **MAN-12 Adaptor**
  - 12-pin adaptor for use MAN trucks.

- **MAN-37 Adaptor**
  - 37-pin adaptor for use MAN trucks.

- **Password Envelope**
  - A piece of paper bearing S/N and Activation Code, which is needed for your registration.

- **Data Cables**
  - Choose the corresponding data cable and connect the HD III and scan tool to perform vehicle diagnosis.

- **DC-IN Power Jack**
  - (For connecting the diagnostic cable.)

- **DC-IN power jack**
  - (For connecting the power adaptor or cigarette lighter/battery clamps cable to obtain power.)

### Diagnostic socket

(For connecting the diagnostic cable.)

### How does it work with the diagnostic tool?

1. **Data I/O port**
   - (For connecting it to the scan tool to perform vehicle diagnosis.)

2. **Scan Tool**
   - (For analyzing vehicle data and indicating the test results.)

3. **Vehicle**
   - (Sends the vehicle data to scan tool)

### EU Declaration of Conformity

Hereby, Launch Tech Co., Ltd declares that the radio equipment type Heavy duty/Medium duty/Light duty Vehicle Communication Interface HD III is in compliance with Directive 2014/53/EU.

**Frequency Range:**
- Bluetooth: 2402 - 2480 MHz
- WiFi (HT20): 2412 - 2472 MHz
- WiFi (HT40): 2422 - 2462 MHz

**Transmit Power:**
- Bluetooth: 16.62 dBm EIRP
- WiFi: 19.29 dBm EIRP

### FCC Statement

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.
1. Vehicle Connection

1. Locate the vehicle’s DLC: The DLC (Data Link Connector) is typically a connector where diagnostic code readers interface with the vehicle’s on-board computer. The DLC location varies from vehicle to vehicle. It is generally located in driver’s cab. If no DLC is found, please refer to Automobile Repair Manual.
2. Switch the ignition on.
3. For vehicles equipped with OBD II management system, plug one end of the diagnostic cable into the vehicle’s DLC, and the other end into the diagnostic socket of the HD III device, and then tighten the captive screws.

   ![](Image)

   - HD III
   - Diagnostic cable
   - To vehicle’s DLC

For vehicles not equipped with OBD II management system, it is necessary to use the corresponding adaptor cable, and then follow one of the methods below to make connection:

   ![](Image)

   - A Power adaptor
   - B Cigarette lighter cable
   - C Battery clamps
e To AC outlet
e To Cigarette lighter receptacle
e To vehicle battery

4. To perform vehicle diagnosis via data cable, connect the B-shaped terminal of the data cable to the HD III and other end to the data I/O port of the scan tool.

2. WLAN Communication Setup

To establish the WLAN communication between the HD III and scan tool, proceed the following steps:
1. Follow the steps mentioned in Section 1 to make connection.
2. Power the scan tool on and launch the diagnostic application.
3. After logging successfully, tap “Personal Center (or [ ] -> “Profile”)” -> “VCI Management (or “Diagnostic connector connection management)” -> select “Use Wi-Fi communication”, a pull-down option list appears:

   ![Work as WLAN hotspot](Image)

   - Work as WLAN hotspot

   Once enabled, the HD III and scan tool forms a LAN network to make communication. In this case, the scan tool can not surf the Internet.

   ![Work as Network adaptor (Recommended)](Image)

   - Work as Network adaptor (Recommended)

   Once enabled, a WLAN connection dialog box appears. Input the network name and access password until it is properly connected. In this case, the scan tool can surf the Internet and communicate with the HD III.

3. Activate HD III & Download Software

If you had a diagnostic tool of 12V passenger car configuration and intend to extend the diagnostics of commercial vehicles, follow the steps described below to activate the HD III:

Note: Please make sure that the diagnostic tool is properly connected to the Internet before proceeding this step.

1. Launch the application, and log in the system using the existing user account of Passenger Vehicle Configuration, and then tap “Personal Center (or [ ] -> “Profile”)” -> “Activate VCI (or “Activate Connector”)”.
2. Input the Product S/N and Activation Code, which can be found in the supplied Password Envelope, then tap “Activate” to activate the HD III.
3. Tap “Update” to enter update center, tap “Update” to download and install the diagnostic software of Commercial vehicles.
4. After the software download is complete, a new “Heavy-duty” tab will appear on the Diagnostic main menu screen.

4. Toggle Between Passenger and Commercial Vehicles

If several VCI connectors and HD III devices are activated on the diagnostic tool, a list of connectors will be displayed in the “VCI (or “My Connector”)” which can be accessed by tapping “Personal Center (or [ ] -> “Profile”).

Switch from a passenger car to a commercial vehicle

If you want to switch from a passenger car to a commercial vehicle, enter “VCI (or “My Connector”)” -> select the HD III S/N (starting with 98649) -> Return to the diagnostic main menu -> connect the HD III, diagnostic tool and vehicle -> tap “Heavy-duty” tab to select the corresponding vehicle model -> follow the on-screen prompts to start a diagnostic session.

Switch from a commercial vehicle to a passenger car

To switch from a commercial vehicle to a passenger car, enter “VCI (or “My Connector”)” -> select the VCI connector S/N -> Return to the diagnostic main menu -> connect the VCI connector, scan tool and vehicle -> Use VINScan(or manual diagnosis) to start diagnosis.

5. Start Diagnostics

Follow the sequence below to start a new diagnostic session.

![Image](Image)

- Tap “Login”
- Follow instructions to activate it
- Tap “Update” to download software
- Select vehicle model
- Select test function
- Tap “Diagnostic”
- Is HD III activated?
- Tap “Login”
- Follow instructions to activate it
- Tap “Update” to download software
- Select vehicle model
- Select test system
- Tap “Diagnostic”
- Is HD III activated?
